### ***Election/Restrictions***

**Claims 18-33 are directed to an allowable product.** Pursuant to the procedures set forth in MPEP § 821.04(b), claims 1-17, previously withdrawn from consideration as a result of a restriction requirement, are hereby rejoined and fully examined for patentability under 37 CFR 1.104.

Because a claimed invention previously withdrawn from consideration under 37 CFR 1.142 has been rejoined, **the restriction requirement, setting forth groups I and II as set forth in the Office action mailed on 12/16/05 is hereby withdrawn.** In view of the withdrawal of the restriction requirement as to the rejoined inventions, applicant(s) are advised that if any claims including all the limitations of an allowable product claim or rejoined process claim are presented in a continuation or divisional application, such claims may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

### **REASONS FOR ALLOWANCE**

**Claims 1-33 are allowed.**

The following is an examiner's statement of reasons for allowance:

The subject matter of the independent claims could either not be found or was not suggested in the prior art of record.

With respect to claims 1-17, the subject matter not found was the shunt including a housing having a first set of electrodes extending along its base, a catheter with a second set of electrodes extending along its length, and wherein the first and second sets of electrodes are electrically connected to one another in combination with the other elements (or steps) in the claims.

With respect to claims 18-33, the subject matter not found was a system and method for clearing an implanted catheter that is connected to a shunt, wherein the system includes a housing having a first set of electrodes extending along its base, a catheter with a second set of electrodes extending along its length, and wherein the first and second sets of electrodes are electrically connected to one another in combination with the other elements (or steps) in the claims.

The prior art of record does not teach of the combination of both the housing and the catheter having electrodes, moreover the prior art does not teach that electrodes of the catheter and housing are electrically connected.

The closest prior art is as follows:

Janssen (5,749,914) and Dretler et al. (2003/0135262) each disclose stents having electrodes embedded within the body of the stent for removing obstructive material from the lumen of the stent.

Schulman et al. (5,651,767) discloses a catheter system including electrodes for delivering fluid to the lumen of a shunt for clearing, however, it does not include a housing and base with electrodes.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
